## Management Summary

70 percent of the data available in companies remains unused to date. Why is that? In many cases, the clearly defined use case that can create added value is missing - and how to approach a data-driven project. A 4-step plan serves as your roadmap: from identifying the appropriate use case, to creating the necessary structures and implementing it as a Minimal Viable Product, to implementing it as a scalable solution that can be rolled out. This white paper serves as a practical, concrete guide for the implementation of your data-driven solutions. With checklists for templates, the technical requirements, and much more.
