

Project Guidelines Nexeed Automation Control plus

The independent automation software

The Process at a Glance

Projects typically proceed as shown on the right – structured in project phases and steps.

Our team will be happy to assist you during the course of the project. Our experience has taught us how to process projects successfully.

1. Familiarization Introduction to the Company

The purpose of the first meeting is to provide you with an overview of our company, products and services.

You will become familiar with the entire range of functions that Nexeed Automation has to offer, as well as its possible fields of application and competence management.

We will be happy to answer your questions and provide you with additional handouts.

2. Joint Seminar The Start of Your Project

We use the seminar to have a look at architecture and specifications as well as software repositories. Together, we will establish a concept for your project.

3. Recommendation Tailor-Made Ordering Recommendations

We help you to find the right combination of hardware, training and services for your project.

4. Request for Quotation Your Requirements

You decide which bundles you would like to use. Based on your selection, we will submit an offer that includes a detailed record of the project data.

5. Our Offer The beginning of your project

You receive an offer that suits your needs.

6. Joint Project Let's Get to Work

Depending on the service you have ordered, we support you during the specific phases.

7. Project Specification Laying the Foundation

Together, we develop the specifications for your project. We rate technologies and processes to reduce risks at an early stage.

8. Offer to End Customers Your Service Description

On the basis of the joint project specification, you are now in the position to offer a customer project.

9. Tender Accepted The Start of Your Plant Project

By now, the joint training of your employees should have begun.

10. Construction Phase Efficient Implementation

Together, we design the construction phase (including both hardware and software) and ensure the project runs smoothly using predefined milestones.

You can rely on our years of production expertise as well as our extensive knowledge when it comes to software and data.

11. Delivery Hardware Your Hardware Package Arrives

You receive the control systems you have ordered fully installed, ready to be assembled and brought into service.

12. Assembly and Commissioning Getting Started on Your Machine

With our many years of experience, we can advise you on the implementation of hardware and software. At an early stage, we integrate systematic tests to ensure a smooth process.

13. Interconnection Test Integrating Flow into the System

Together, we plan the necessary infrastructure and connectivity so that we can test the material flow as comprehensively as possible at an early stage.

14. Commissioning with the Customer Operator-Side Integration

Training the operator early on helps you to commission the machine efficiently. Our training team will be happy to support you with this.

15. Acceptance Acceptance of Your Plant Project

Our expertise allows us to assist you when it comes to the final acceptance of the software with the end customer.

16. Ramp-Up Efficient Ramp-Up

We assist you when it is finally time to start up the end customer's production lines.

By evaluating operating figures, we focus on all bottlenecks and assess the effect of each measure.

17. Support Continuous Life-Cycle Management

Modern IT solutions require continuous patch management. Our infrastructure allows us to provide you with excellent support during each of these project stages.

We look forward to our collaboration.

Services

Consulting

Expert consultation on the topic Nexeed Automation.

Development

Take advantage of our development services to devise the software packages you need for your project.

Application

We will be glad to support you in developing applications.

Coaching
